GENERAL REPORT SUMMARY

This electromagnetic emission test report is generated by Compatible Electronics Inc., which is an independent testing and consulting firm. The test report is based on testing performed by Compatible Electronics personnel according to the measurement procedures described in the test specifications given below and in the "Test Procedures" section of this report.

The measurement data and conclusions appearing herein relate only to the sample tested and this report may not be reproduced in any form unless done so in full with the written permission of Compatible Electronics.

This report must not be used to claim product certification, approval or endorsement by NVLAP, NIST, or any agency of the federal government.

Device Tested: Bluetooth Beacon

Model: BTM-150-B

S/N: None

Product Description: The device is a battery powered (coin cell) Bluetooth beacon. There is only one mode of

operation. In this mode of operation the unit transmits advertisements on the 3 designated advertising channels per the Bluetooth specification. Under normal operation, the time between advertisements will range from every 100milliseconds to several seconds.

Modifications: The EUT was not modified in order to comply with specifications.

Manufacturer: Mobilogix, Inc.

1 Spectrum Pointe Dr., Suite 225

Lake Forest, CA 92630

Test Dates: April 18, 25, 2016

Test Specifications: EMI requirements

CFR Title 47, Part 15 Subpart C Sections 15.205, 15.209, & 15.247.

RSS 247 & RSS GEN

Test Procedure: ANSI C63.4 & C63.10, and KDB 558074 D01 v03r05.

Report Number: D60425R1

SUMMARY OF TEST RESULTS

| TEST | DESCRIPTION | RESULTS |
|------|---|---|
| 1 | Conducted RF Emissions, 150 kHz - 30 MHz | The EUT is battery powered; therefore this test was not performed |
| 2 | Radiated RF Emissions & Harmonics, 9 kHz – 25,000 MHz | Complies with the limits of CFR Title 47 Part 15 Subpart C Sections 15.205, 15.209, and RSS GEN |
| 3 | DTS Bandwidth | Complies with CFR Title 47 Part 15 Subpart C Section 15.247 and RSS 247 |
| 4 | Maximum Peak Conducted Output Power | Complies with CFR Title 47 Part 15 Subpart C Section 15.247 and RSS 247 |
| 5 | Maximum Peak Power Spectral Density Level In The Fundamental Emission | Complies with CFR Title 47 Part 15 Subpart C Section 15.247 and RSS 247 |
| 6 | Emissions in Non-Restricted Frequency Bands (in 100kHz Bandwidth) | Complies with CFR Title 47 Part 15 Subpart C Section 15.247 and RSS 247 |
| 7 | Emissions in the Restricted Bands | Complies with CFR Title 47 Part 15 Subpart C Section 15.247 and RSS 247 |

TABLE 1: SIX HIGHEST RADIATED EMISSIONS READINGS

| | Reading Type (PK / QP / AV) | Polarization (Vert / Horz) | Frequency (MHz) | Level (dBµV/m) | Limit (dBµV/m) | Delta (dB) | Test Distance |

Report Number: D60425R1 FCC ID: 2AH4HBTM150B

1. PURPOSE

This document is a qualification test report based on the Electromagnetic Interference (EMI) tests performed on the Bluetooth Beacon Model: BTM-150-B. The EMI measurements were performed according to the measurement procedure described in ANSI C63.10 & C63.4. The tests were performed in order to determine whether the electromagnetic emissions from the equipment under test, referred to as EUT (equipment under test) hereafter, are within the specification limits defined by the Code of Federal Regulations Title 47, Part 15 Subpart C sections 15.205, 15.209, 15.247, RSS GEN, and RSS 247.

Report Number: D60425R1

2. ADMINISTRATIVE DATA

2.1 **Location of Testing**

The tests described herein were performed at the test facility of Compatible Electronics, 20621 Pascal Way Lake Forest, California 92630.

2.2 **Traceability Statement**

The calibration certificates of all test equipment used during the test are on file at the location of the test. The calibration is traceable to the National Institute of Standards and Technology (NIST).

2.3 **Cognizant Personnel**

Mobilogix, Inc.

VP of Engineering Rod DeMay

Compatible Electronics Inc.

Torey Oliver Test Technician Matt Harrison Lab Manager

2.4 **Date Test Sample was Received**

The test sample was received on April 25, 2016.

2.5 **Disposition of the Test Sample**

The test sample remains at Compatible Electronics as of the date of this test report.

2.6 **Abbreviations and Acronyms**

The following abbreviations and acronyms may be used in this document.

RF Radio Frequency

Electromagnetic Interference **EMI EUT** Equipment Under Test

P/N Part Number Serial Number S/N HP Hewlett Packard

ITE Information Technology Equipment

CML Corrected Meter Limit

LISN Line Impedance Stabilization Network

NVLAP National Voluntary Laboratory Accreditation Program

Report Number: D60425R1

DESCRIPTION OF TEST CONFIGURATION

4.1 **Description of Test Configuration**

The Bluetooth Beacon Model: BTM-150-B (EUT) was setup in a tabletop configuration. The EUT was powered by a coin cell battery. The EUT was continuously transmitting a data stream. The EUT was checked in all axes and the Z-Axis was found to be the worst case.

The tests were performed with a new battery.

It was determined that the emissions were at their highest level when the EUT was transmitting in the configuration described above for Radiated Emissions. The final radiated data was taken in the above configuration. Please see Appendix E for the test data.

4.1.1 **Photograph Test Configuration (Z-Axis Shown)**

4.1.2 Cable Construction and Termination

There were no interconnecting cables.

5. LISTS OF EUT, ACCESSORIES AND TEST EQUIPMENT

FCC ID: 2AH4HBTM150B FCC Part 15 Subpart C Section 15.247, RSS GEN, & RSS 247 Test Report

Report Number: D60425R1

TEST SITE DESCRIPTION **6.**

6.1 **Test Facility Description**

Please refer to section 2.1 and the figures in Appendix D of this report for test location.

6.2 **EUT Mounting, Bonding and Grounding**

The EUT was mounted on a 1.0 by 1.5 by 0.8 meters high non-conductive table, which was placed on the ground plane.

For testing above 1 GHz the EUT was mounted 1.5 meter above the ground plane.

The EUT was grounded through the USB Cable.

6.3 **Facility Environmental Characteristics**

When applicable refer to the data sheets in Appendix E for the relative humidity, air temperature, and barometric pressure.

FCC ID: 2AH4HBTM150B FCC Part 15 Subpart C Section 15.247, RSS GEN, & RSS 247 Test Report

CHARACTERISTICS OF THE TRANSMITTER 7.

7.1 Channel Number and Frequencies

There are a total of 40 channels. The low channel is at 2402.0 MHz and the high channel is at 2480.0 MHz. There is approximately 2 MHz separation between channels and the EUT uses GFSK modulation.

7.2 Antenna

The antenna is a chip antenna located on the PCB.

FCC Part 15 Subpart C Section 15.247, RSS GEN, & RSS 247 Test Report

8. TEST PROCEDURES

The following sections describe the test methods and the specifications for the tests. Test results are also included in this section.

8.1 RF Emissions

8.1.1 Conducted Emissions Test

Test Results: The EUT is battery powered; therefore this test was not performed.

The EMI receiver was used as a measuring meter. A quasi-peak and/or average reading was taken only where indicated in the data sheets. The LISN output was measured using the EMI receiver. The output of the second LISN was terminated by a 50-ohm termination. The effective measurement bandwidth used for this test was 9 kHz.

Please see section 6.2 of this report for mounting, bonding, and grounding of the EUT. The EUT received its power through the LISN, which was bonded to the ground plane. The EUT was set up with the minimum distances from any conductive surfaces as specified in ANSI 63.4. The excess power cord was wrapped in a figure eight pattern to form a bundle not exceeding 0.4 meters in length.

The conducted emissions from the EUT were maximized for operating mode as well as cable placement. The final data was collected under program control by the computer software. The final qualification data is located in Appendix E.

Report Number: D60425R1

8.1.2 Radiated Emissions (Spurious and Harmonics) Test

The R&S receiver was used as a measuring meter. The receiver was used in the peak detect mode with the "Max Hold" feature activated. In this mode, the receiver records the highest measured reading over all the sweeps. Amplifiers were used to increase the sensitivity of the instrument. There were two Microwave Preamplifier used for frequencies above 1 GHz.

For spurious emissions the quasi-peak detector was used for frequencies below 1GHz and the average detector was used for frequencies above 1 GHz.

For the radiated Harmonic emissions and Band Edges a duty cycle average was used.

The measurement bandwidths and transducers used for the radiated emissions test were:

| FREQUENCY RANGE (MHz) | TRANSDUCER | EFFECTIVE MEASUREMENT BANDWIDTH |
|-----------------------------|---------------------|---------------------------------------|
| .009 to .150 | Active Loop Antenna | 200 Hz |
| .150 to 30 | Active Loop Antenna | 9 kHz |
| 30 to 1000 | Combilog Antenna | 100 kHz (120kHz for QP Measurements) |
| 1000 to 25000 | Horn Antenna | 1 MHz |

The TDK FAC-3 shielded test chamber of Compatible Electronics, Inc. was used for radiated emissions testing. This test site is in full compliance with ANSI, EN 50147-2, and CISPR 22. Please see section 6.2 of this report for mounting, bonding and grounding of the EUT. The turntable supporting the EUT is remote controlled using a motor. The turntable permits EUT rotation of 360 degrees in order to maximize emissions. Also, the antenna mast allows height variation of the antenna from 1 meter to 4 meters. Data was collected in the worst case (highest emission) configuration of the EUT. At each reading, the EUT was rotated 360 degrees and the antenna height was varied from 1 to 4 meters in both vertical and horizontal polarizations (for E field radiated field strength).

Test Results:

The EUT complies with the limits of CFR Title 47 Part 15 Subpart C sections 15.205, 15.209, 15.247, RSS 247, and RSS GEN.

Report Number: D60425R1 FCC ID: 2AH4HBTM150B

8.1.3 DTS Bandwidth

The DTS Bandwidth was measured directly connected to the EMI Receiver using a RBW of 100 kHz and a VBW of 300 kHz. A peak detector and a max hold trace were used with auto sweep time. The trace was allowed to fully maximize. We measured the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission. The automatic bandwidth measurement capability of the EMI Receiver was employed using the n dB bandwidth mode with n set to 6 dB. The final qualification data sheets are located in Appendix E.

Test Results:

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

8.1.4 Maximum Peak Conducted Output Power

The maximum peak conducted output power was measured using a Peak Power Meter. The Peak Power Meter used a resolution bandwidth that is greater than the DTS bandwidth and a video bandwidth greater than 3 x RBW. The final qualification data sheets are located in Appendix E.

Test Results:

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

8.1.5 Maximum Peak Power Spectral Density Level In The Fundamental Emission

The Maximum Peak Power Spectral Density Level in the Fundamental Emission was measured directly connected to the EMI Receiver. Tuned to the center frequency of the DTS channel and set the span to 1.5 times the DTS bandwidth. RBW was set to minimum 3 kHz but not > 100kHz and VBW 3 * RBW. A peak detector was used with the sweep time set to auto. A max hold trace was used and allowed to fully stabilize. The peak marker function was used to determine the maximum amplitude level within the RBW. The final qualification data sheets are located in Appendix E.

Test Results:

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

Report Number: D60425R1

8.1.6 **Emissions in Non-Restricted Frequency Bands (in 100kHz Bandwidth)**

The Emissions in Non-Restricted Frequency Bands (in 100kHz Bandwidth) measurements were performed using the EMI Receiver directly connected to the EUT. A reference level was established by setting the instrument center frequency to DTS channel center frequency. The span was set to \geq 1.5 times the DTS bandwidth. The RBW was 100 kHz and VBW 300 kHz. A peak detector was used with a sweep time set to auto. A max hold trace was used and allowed to fully stabilize. The peak marker function was used to determine the level and 20dB below that was the reference level. For Emission Level Measurement the center frequency and span were set to encompass the frequency range to be measured. RBW was set to 100 kHz and VBW to 300 kHz. A peak detector was used with a sweep time set to auto. The number of measurement points were greater than span/RBW. A max hold trace was used and allowed to fully stabilize. The peak marker function was used to determine the maximum amplitude level. The final qualification data sheets are located in Appendix E.

Test Results:

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

8.1.7 **Emissions in the Restricted Bands (Radiated)**

The Emissions in the Restricted Bands measurement was performed using the EMI Receiver at a 3meter test distance to obtain the final test data. The final qualification data sheets are located in Appendix E.

Test Results:

The EUT complies with Part 15 Subpart C, Section 15.205 and RSS GEN.

8.1.8 **Emissions Radiated Outside of the Fundamental Frequency Band**

The Band Edge measurement was performed using the EMI Receiver at a 3-meter test distance to obtain the final test data. The low and high channels were tuned to during the low and high band edge tests. The final qualification data sheets are located in Appendix E.

Test Results:

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

Report Number: D60425R1

8.1.9 Fundamental Field Strength (Duty Cycle Calculations)

The Peak Transmit Radiated Field Strength was measured at a 3-meter test distance. The EMI Receiver was used to obtain the final test data. The final qualification data sheets are located in Appendix E.

Where

$$\delta(dB) = 20 \log \left[\sum (nt_1 + mt_2 + ... + \xi t_x) / T \right]$$

n is the number of pulses of duration t1 m is the number of pulses of duration t2 ξ is the number of pulses of duration txT is the period of the pulse train or 100 ms if the pulse train length is greater than 100 ms

Duty Cycle Correction Factor = -20.00dB

Pulse = 1 * 396.993988 uS

Total On Time = 0.396993988 mS

Duty Cycle Train was longer than 100mS; therefore 100mS span was used.

0.396993988 mS / 100 mS = 0.00396993988

 $20 \log (0.00396993988) = -48.02 \text{ dB correction factor}$

Max Duty Cycle Correction Factor = -20.00dB

Test Results:

The EUT complies with Part 15 Subpart C, Section 15.249.

9. TEST PROCEDURE DEVIATIONS

The test procedures were not deviated from throughout all tests.

10. CONCLUSIONS

The Bluetooth Beacon Model: BTM-150-B meets all of the relevant specification requirements defined in the Code of Federal Regulations Title 47, Part 15 Subpart C sections 15.205, 15.207, 15.209, 15.247, RSS GEN & RSS 247.

RADIATED EMISSIONS DATA SHEETS

FCC Part 15 Subpart C Section 15.247, RSS GEN, & RSS 247 Test Report

Title: FCC 15.209 & RSS GEN 4/24/2016 4:29:41 PM File: Radiated Pre-Scan 30-1000Mhz.set Sequence: Preliminary Scan

Operator: Torey Oliver EUT Type: BTM-150-B

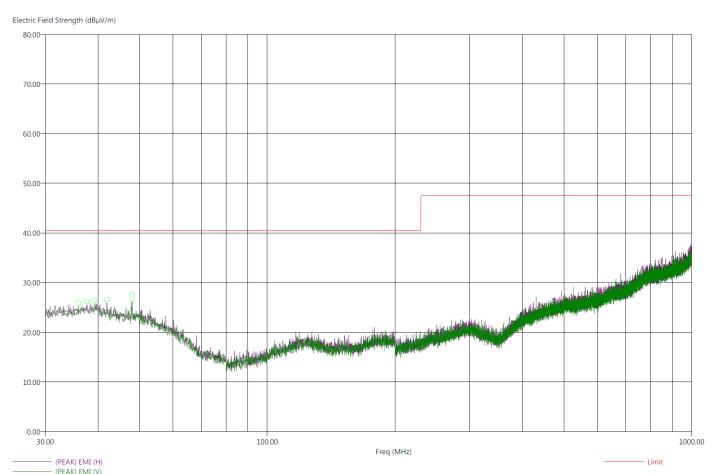

EUT Condition: The EUT is constantly transmitting 2402 MHz.

Comments: Z Axis

Temp: 72f Hum: 33%

Battery Powered

Compatible Electronics, Inc. FAC-3 (Lab R)

This was worst case for all modes and channels There were no radiated emissions besides harmonics found between 9kHz-30 MHz or 1GHz-25GHz.

Title: FCC 15.209 4/24/2016 4:52:16 PM File: Radiated Final 30-1000Mhz.set Sequence: Final Measurements

Operator: Torey Oliver EUT Type: BTM-150-B

EUT Condition: The EUT is constantly transmitting 2402 MHz.

Comments: Z Axis

Temp: 72f Hum: 33%

Battery Powered
